1. Please derive the calculation formula of D with soil temperature observation at two depths.

$$D = \frac{z_1 - z_2}{\ln(T_{z2} - T_{ave}) - \ln(T_{z1} - T_{ave})}$$

Answer:

$$T = T_{ave} \pm A(0)\exp(-z/D)$$

$$\Rightarrow \frac{-z}{D} = \ln \frac{T - T_{ave}}{\pm A(0)}$$

$$\Rightarrow \frac{-z_1}{D} - \frac{-z_2}{D} = \ln \frac{T_1 - T_{ave}}{\pm A(0)} - \ln \frac{T_2 - T_{ave}}{\pm A(0)}$$

$$\Rightarrow \frac{-z_1 + z_2}{D} = \ln \frac{T_1 - T_{ave}}{T_2 - T_{ave}}$$

$$\Rightarrow D = \frac{z_1 - z_2}{\ln(T_{z2} - T_{ave}) - \ln(T_{z1} - T_{ave})}$$
